Refuse solutions to manage waste in more efficient ways

Bucher Force series 3 front loader

Since its release in 2011, the Force front loader (which stands for Front Operating Refuse Collection Equipment) has led the market in front loading refuse collection equipment.

This state-of-the-art equipment has been specifically designed, tested and manufactured to endure rugged Australian conditions meeting the physical and time demands of industrial waste collection routes. Its high packing forces and durable body design allows the Force series 3 to carry the maximum payloads possible, meaning you can service more bins before having to empty the load.

Bucher Municipal's "floating blade" technology minimises blade jams for maximum uptime and market-leading productivity.

The Force series 3 front loader has been designed to meet customers' expectations around durability, productivity, safety and reliability.

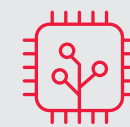

Available in 28.5m3 & 33.5m3 body sizes

What benefits does the Bucher Force series 3 front loader offer?

Reliability

Increased uptime with Bucher's "floating blade" technology to minimise blade jams paired with Bucher hydraulics for fast and reliable operation.

Efficiency

On demand Bucher hydraulics with load sensing pump and smart valves for fuel efficient operation.

Productivity

With a 12 second lift cycle and the ability to pack the load and pick up bins simultaneously, the Force series 3 front loader is the fastest, most productive front loader in its class.

Powerful

Twin pack cylinders and durable body design for market leading payloads.

Three lid hopper system

Improves shielding to minimise wind-blown rubbish, overall operating height and reducing the overall environmental impact of the vehicle

Ability to pack the load and pick up bins simultaneously

For greater efficiency at sites with multiple bins

Front ZONE detection system

Fully integrated into Bucher control system to eliminate additional screens and clutter in cab for safer operations

Fastest, most efficient front loader

With 2500kg lift capacity and 12 sec lift cycle time, allowing drivers to pick up more bins per shift

Lighting

Rear LED beacons, Upper and lower LED taillights fitted as standard

Body construction

From single sheet wear resistant steel, providing longer working life

Safety

- Tailgate safety props
- E stops
- Incab warning system
- Pedestrian protection
- Fall arrest cables

Scissor-type compaction system

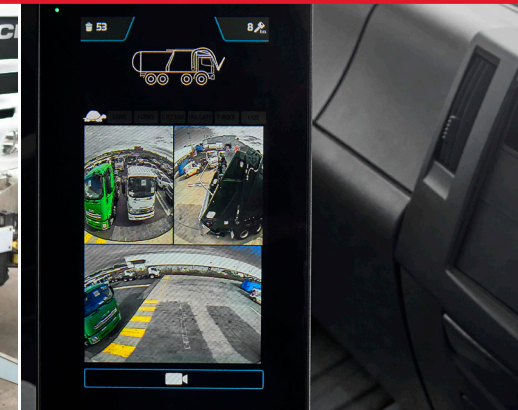

Enables a higher compaction force and greater payloads

Bucher Municipal's 'On Demand' hydraulic system

Provides more efficient operations and fuel savings for reduced running costs

BUCHER hydraulics

Pack the load

Bucher's twin cylinder and "floating blade" compaction system designed to move in a fluid motion as it packs, loads and picks up bins simultaneously. Boasting minimal blade jams and high compaction forces for maximum payload.

Bucher hydraulics

Experience enhanced performance and cost savings with the Force series 3 hydraulic system. Hydraulic valve banks exclusively designed and produced by Bucher hydraulics for Bucher Municipal vehicles. The System boasts advanced anti-tamper technology, and direct control from the control screen along with increased savings in maintenance and parts.

MGB lifter with wireless remote

Suits full range of 80L-1100L MGBs. Robust bolt-on design with clamp bar and belt with winch to secure bin during tipping.

Bucher IQ

Bucher IQ integrates into the vehicles CANBus system providing a fully integrated control system with increased diagnostics and system configuration.

Bin lifter weighing systems

Fully integrated options available to monitor payloads, axle limits and individual bin weights. NMI certified options available for charge by weight capabilities.

Technology

Bucher offer a wide range of technologies and accessories for waste management fleets. Anti roll away, zone detection, pack on the run, 360° birdseye cameras are some of the many options available to keep your fleet ahead of the game.
